Projects
https://github.com/cjredmond

Django on Rails:
A program designed to mirror the "generate" command in Ruby on Rails. The aim is to increase efficiency when programming with Django.
- Python/Django

Notebook App:
An app where a user can create create, edit and delete notes that are saved to their profile.
https://secure-plains-93842.herokuapp.com
- Ruby/Rails
- Heroku
- Postgresql

BeginCount:
An app that allows users to pick a date and time to count down to. A user can update the countdown title, as well as upload images to serve as the countdowns background.
http://begincount.com
- Python/Django
- JavaScript
- Heroku
- Amazon Lightsail

Experience

BackEnd Developer Intern   1/2017 - 3/2017
Tembo Education | Remote

Maintain Flask based app that sends, receives and records text messages from parents and educators. Converted SQL code to Python peewee. Aided in restructuring of models for alpha testing of TemboAmerica.

BackEnd Developer   9/2016 - 12/2016
The Iron Yard | Greenville, SC

Python/Django 12 week course. Completed weekly projects including: Reddit clone, Imgur clone, bank app, child care sign in app, MovieLens database. Created point of service restaurant app with a classmate using GIT. Constructed online portfolio with all apps live on Heroku.

Education

Bachelor of Arts: History   Start date - 5/2015
SUNY Stony Brook | Stony Brook, NY
